Program the functionalities of the Power button of the TV RCU to the Learning Key of the STB RCU.

1. Press the "Power and Mute" buttons together and hold for 3 seconds, the indicator light will be a long light and will proceed into the learning state;
2. Press the button and the indicator light will turn long light to flashing light which is in a state of learning receive;
3. Aim the two remotes at a similar level in a straight line, keeping them 1-3 cm apart and press the power button of the TV’s RCU. The indicator light will then flash three times and transition into a long light indicating that the learning process is complete.
4. Once you complete the learning process, press the "OK" button on the STB RCU to save and exit the learning.

Note: You must maintain stability between the two RCUs and avoid any movements during the learning process.
1. Once the STB is powered up, below Welcome screen will appear. Press OK to Continue.

2. Press OK button to setup Wi-Fi.

3. Select and connect to the preferred Wi-Fi connection by providing the relevant password.

4. The initial set up is then complete. Click OK button to launch PEO TV Go App.

Tips: If you are using an Ethernet cable, connect LAN port of STB to your home router (For SLT provided routers, other than LTE routers, port 4 should not be used for Ethernet connectivity).
5. Once the PEO TV Go App is launched, enter the Validation Code obtained at the registration process. (Note: The Validation Code will be sent via E-mail and SMS or can be obtained over the self-care portal. Visit https://selfcare.peotv.com for self-care portal).

6. The PEO TV Go App will then launch successfully.

During Lightning, it is advised to unplug all equipment from the AC mains supply for better protection.
